**ECL304 - Skill Lab: C++ and Java Programming**  
**Sem III**  
**2021-22**

<b>Lab Number:</b>	<b>6</b>
<b>Student Name:</b>	Rishi Rameshkumar Dubey
<b>Roll No :</b>	<b>3</b>

**Title:**

1. To perform Multiple Inheritance in C++. Create a student class representing student roll number, name and branch and an exam class (derived class of student) representing the scores of the student in various subjects (maths, physics and chemistry) and sports class representing the score in sports. The sports and exam class is inherited by a result class which adds the exam marks and sports score to generate the final result.
2. To perform Hierarchical Inheritance in C++. Create an Employee class with attributes EmpID and EmpSalary. Also create necessary methods/constructors to accept these values from the user. Create classes permanentEmployee and TemporaryEmployee which will be derived classes of Employee. Mention hike attribute in these derived classes and calculate the total salary using generate\_salary() method for respective types of employees. Objects of the derived classes should be created and salaries for the permanent and temporary employees should be calculated and displayed on the screen.

**Learning Objective:**

- Students will be able to perform multiple inheritance using C++.

**Learning Outcome:**

- Understanding the inheritance concept and reusability of the code.

**Course Outcome:**

<b>ECL304.2</b>	Comprehend building blocks of OOPs language, inheritance, package and interfaces
-----------------	--

**Theory:**

- Explain in details about inheritance, its types, syntaxes and block diagrams.

Solution:- **Inheritance is a mechanism of acquiring the features and behaviors of a class by another class. The class whose members are inherited is called the base class, and the class that inherits those members is called the derived class. Inheritance IS-A implements the relationship. IS-A mammal; Hence dog IS-A**

**For example, mammal animal, dog animal as well.**

**OOPs support the six different types of inheritance as given below :**

- 1. Single inheritance**
- 2. Multi-level inheritance**
- 3. Multiple inheritance**
- 4. Multipath inheritance**
- 5. Hierarchical Inheritance**
- 6. Hybrid Inheritance**

### 1. Single inheritance

**In this inheritance, a derived class is created from a single base class.**  
In the given example, Class A is the parent class and Class B is the child class since Class B inherits the features and behavior of the parent class A.

### Syntax for Single Inheritance

```
//Base Class  
  
class A  
  
{ public void  
  
fooA()  
  
{  
  
//TO DO:  
  
}  
  
}
```

**Don Bosco Institute of Technology, Kurla(W)**  
**Department of Electronics and Tele-Communication Engineering**  
**ECL304 - Skill Lab: C++ and Java Programming**  
**Sem III**  
**2021-22**

```
//Derived Class

class B : A {

public void fooB()

{

//TO DO:

}

}
```

## 2. Multi-level inheritance

**In this inheritance, a derived class is created from another derived class.**  
**In the given example, class C inherits the properties and behavior of class B and class B inherits the properties and behavior of class A. So, here A is the parent class of B and class B is the parent class of C. So, here class C implicitly inherits the properties and behavior of class A along with Class B i.e there is a multilevel of inheritance.**

## Syntax for Multi-level Inheritance

```
//Base Class

class A {

public void fooA()

{
```

**Don Bosco Institute of Technology, Kurla(W)**  
**Department of Electronics and Tele-Communication Engineering**  
**ECL304 - Skill Lab: C++ and Java Programming**  
**Sem III**  
**2021-22**

```
//TO DO:  
}  
}  
  
//Derived Class  
  
class B : A {  
  
public void fooB()  
  
{  
  
//TO DO:  
}  
}  
  
//Derived Class  
  
class C : B  
  
{ public void  
fooC()  
  
{  
  
//TO DO:  
}  
}
```

3. Multiple inheritance

**In this inheritance, a derived class is created from more than one base class. This inheritance is not supported by .NET Languages like C#, F# etc. and Java Language. In the given example, class C inherits the properties and behavior of class A and class B at same level. So, here Class A and Class B both are the parent classes for Class C.**

### Syntax for Multiple Inheritance

```
//Base Class class  
A { public void  
fooA()  
{  
//TO DO:  
}  
}  
  
//Base Class  
class B {  
public void fooB()  
{  
//TO DO:  
}  
}
```

**Don Bosco Institute of Technology, Kurla(W)**  
**Department of Electronics and Tele-Communication Engineering**  
**ECL304 - Skill Lab: C++ and Java Programming**  
**Sem III**  
**2021-22**

```
//Derived Class  
  
class C : A, B  
  
{  public void  
  
fooC()  
  
{  
  
//TO DO:  
  
}  
}
```

#### 4. Multipath inheritance

**In this inheritance, a derived class is created from another derived classes and the same base class of another derived classes. This inheritance is not supported by .NET Languages like C#, F# etc.**

**In the given example, class D inherits the properties and behavior of class C and class B as well as Class A. Both class C and class B inherits the Class A. So, Class A is the parent for Class B and Class C as well as Class D. So it's making it Multipath inheritance.**

Syntax for Multipath Inheritance

**Don Bosco Institute of Technology, Kurla(W)**  
**Department of Electronics and Tele-Communication Engineering**  
**ECL304 - Skill Lab: C++ and Java Programming**  
**Sem III**  
**2021-22**

```
//Base Class class  
A { public void  
fooA()  
{  
//TO DO:  
}  
}  
  
//Derived Class  
  
class B : A {  
public void fooB()  
{  
//TO DO:  
} }  
  
//Derived Class  
  
class C : A  
{ public void  
fooC()  
{  
//TO DO:  
}  
}
```

**Don Bosco Institute of Technology, Kurla(W)**  
**Department of Electronics and Tele-Communication Engineering**  
**ECL304 - Skill Lab: C++ and Java Programming**  
**Sem III**  
**2021-22**

```
//Derived Class  
  
class D : B, A, C  
  
{ public void  
  
fooD()  
  
{  
  
//TO DO:  
  
}  
}
```

## 5. Hierarchical Inheritance

**In this inheritance, more than one derived classes are created from a single base class and further child classes act as parent classes for more than one child classes. In the given example, class A has two childs class B and class D. Further, class B and class C both are having two childs - class D and E; class F and G respectively.**

```
//Base Class class  
  
A { public void  
  
fooA()  
  
{  
  
//TO DO:
```

**Don Bosco Institute of Technology, Kurla(W)**  
**Department of Electronics and Tele-Communication Engineering**  
**ECL304 - Skill Lab: C++ and Java Programming**  
**Sem III**  
**2021-22**

Syntax for Hierarchical Inheritance

```
}

}

//Derived Class

class B : A

{
    public void
    fooB()
```

**Don Bosco Institute of Technology, Kurla(W)**  
**Department of Electronics and Tele-Communication Engineering**  
**ECL304 - Skill Lab: C++ and Java Programming**  
**Sem III**  
**2021-22**

```
{  
//TO DO:  
}  
  
}  
  
  
//Derived Class  
  
class C : A  
  
{ public void  
fooC()  
  
{  
//TO DO:  
}  
  
}  
  
  
//Derived Class  
  
class D : C  
  
{ public void  
fooD()  
  
{  
//TO DO:  
}  
  
}  
  
  
//Derived Class
```

**Don Bosco Institute of Technology, Kurla(W)**  
**Department of Electronics and Tele-Communication Engineering**  
**ECL304 - Skill Lab: C++ and Java Programming**  
**Sem III**  
**2021-22**

```
class E : C
{
    public void
fooE()
{
    //TO DO:
}
}
```

```
//Derived Class

class F : B
{
    public void
fooF()
{
    //TO DO:
}
}
```

```
//Derived Class

class G :B
{
    public void
fooG()
{
    //TO DO:
}
```

**Don Bosco Institute of Technology, Kurla(W)**  
**Department of Electronics and Tele-Communication Engineering**  
**ECL304 - Skill Lab: C++ and Java Programming**  
**Sem III**  
**2021-22**

}

}

**Faculty: Ms. Deepali Kayande**

## 6. Hybrid inheritance

**This is combination of more than one inheritance. Hence, it may be a combination of Multilevel and Multiple inheritance or Hierarchical and Multilevel inheritance or Hierarchical and Multipath inheritance or Hierarchical, Multilevel and Multiple inheritance.**

**Since .NET Languages like C#, F# etc. does not support multiple and multipath inheritance. Hence hybrid inheritance with a combination of multiple or multipath inheritances is not supported by .NET Languages.**

Hybrid Inheritance – (a combination of Hierarchical and multiple)

### Syntax for Hybrid Inheritance

```
//Base Class class  
A { public void  
fooA()  
{  
//TO DO:  
}  
}
```

**Don Bosco Institute of Technology, Kurla(W)**  
**Department of Electronics and Tele-Communication Engineering**  
**ECL304 - Skill Lab: C++ and Java Programming**  
**Sem III**  
**2021-22**

```
//Base Class class
```

```
F { public void  
fooF()  
{  
//TO DO:  
}  
}
```

```
//Derived Class
```

```
class B : A, F  
{ public void  
fooB()  
{  
//TO DO:  
}  
}
```

```
//Derived Class
```

```
class C : A  
{ public void  
fooC()  
{  
//TO DO:
```

**Don Bosco Institute of Technology, Kurla(W)**  
**Department of Electronics and Tele-Communication Engineering**  
**ECL304 - Skill Lab: C++ and Java Programming**  
**Sem III**  
**2021-22**

```
}

}

//Derived Class

class D : C {

public void fooD()

{

//TO DO:

}

}

//Derived Class

class E : C

{ public void

fooE()

{

//TO DO:

}

}
```

**6.0(Multiple) :- Input given a=3 b= 21 10**

**OUTPUT:**

**Don Bosco Institute of Technology, Kurla(W)**  
**Department of Electronics and Tele-Communication Engineering**  
**ECL304 - Skill Lab: C++ and Java Programming**  
**Sem III**  
**2021-22**

```
42 | main() {  
|     ^  
sh: 1: cls: not found  
Enter the Roll no :3  
Enter the two marks  :21 10  
  
Enter the sports mark :6  
  
    Roll No      : 3  
    Total       : 37  
    Average     : 12  
  
...Program finished with exit code 0  
Press ENTER to exit console.[]
```

**Don Bosco Institute of Technology, Kurla(W)**  
**Department of Electronics and Tele-Communication Engineering**  
**ECL304 - Skill Lab: C++ and Java Programming**  
**Sem III**  
**2021-22**

**6.1(Hierarchical) :- Input given:- a= xyz b= 987 c= M**

**OUTPUT:**

```
input
Enter employee's basic info:
Enter Name: xyz
Enter Emp. Id: 987
Enter Gender: M
Enter employee's department info:
Enter Department Name: Electronics
Enter assigned work: Managing
Enter time in hours to complete work: 77
Employee's Information is:
Basic Information...
Name: xyz
Employee ID: 987
Gender: M

Department Information...
Department Name: Electronics
Assigned Work: Managing
Time to complete work: 77

...Program finished with exit code 0
Press ENTER to exit console.[]
```
